

## **Question**

Using the theories of regulation discussed in this course, critically assess the EU's decision to adopt a risk-based regulatory approach in the AI Act. Draw on the course readings to analyse whether and how these theories help to explain the advantages and limitations of the EU's approach, and its decision to govern AI in this way.

---

## **Word limit**

Your answer should be no longer than 1000 words, including footnotes.

## **Deadline**

The final deadline for assignment is **13 February 2026, 4pm (UK time)**, and submission must be via Moodle. As this is a formative assignment, **no extensions** will be granted.

## **Bibliography**

You do not have to provide a separate bibliography.

## **Referencing**

When preparing your answer remember to include references to information, works and ideas of others you engage with. Although no particular referencing style is required, we recommend using the OSCOLA style, as this is used by the School of Law and will be required for essays and dissertations. In any case, since this assignment mimics an exam, short references, as long as they enable identification of a source you are referring to, are also accepted. E.g. it would be sufficient to say that a particular idea was developed by Joel Reidenberg in his seminal article on Lex Informatica, without providing the full title and journal this article has been published in.
